Education

GGITS, RGPV University — Jabalpur, India
Bachelor of Technology – Mechanical Engineering (8.61 CGPA) — Aug 2017 – May 2021

Experience

JP Morgan Chase — Hyderabad, India
Software Engineer II — 2025 – Present

- Built scalable recommendation and personalization platforms delivering low-latency recommendations at **8000 TPS** with **p99.9 latency under 200ms**.
- Built **P&I Agent**, a multi-agent system with a user-facing **orchestrator agent** delegating to a **sub-agent** that performs multi-step tool calls and invokes a downstream agent to construct audiences, powered by a fine-tuned **SLM deployed on a Ray cluster**; automated a process that previously took a week.
- Built distributed streaming pipelines using **Apache Flink** and Kafka, processing **800M+ user interaction events/day** for real-time engagement aggregation.
- Built a config-driven feature engineering framework on **Amazon EMR**, enabling developers to build Spark ETL pipelines with minimal Spark expertise.
- Led migration of services from single-region to **multi-region architecture**, improving resiliency and fault tolerance of critical systems.
- Built cloud infrastructure using **AWS, Terraform and Kubernetes**, and implemented observability (Datadog dashboards, distributed tracing, canonical logging) for production systems.
- Drove internal developer efficiency initiatives — automated farm-break remediation, and built custom **MCP servers** and AI skills to streamline day-to-day engineering workflows.

Payment Services Integrators — Pune, India
Senior Software Engineer — Mar 2024 – Present

- Contributed to the design and development of Wells Fargo's **Managed Rates Engine**, delivering production go-live for the Enhanced Deposits Global Program in **11 weeks with zero defects**.
- Built **EuclidPro**, a configurable platform enabling workflow-driven integrations across APIs, messaging systems and scheduled jobs.
- Integrated distributed messaging and caching technologies including **Kafka, MQ and Hazelcast** while managing scalable deployments on **Kubernetes (Azure)**.

Capgemini (Client – HSBC) — Pune, India
Software Engineer — Oct 2021 – Mar 2024

- Migrated legacy systems to a **microservices architecture** improving scalability and maintainability of enterprise payment platforms.
- Developed integration services using **Apache Camel** enabling message transformation, routing and validation across distributed systems.
- Built a reusable integration framework supporting **Kafka, MQ and REST APIs** for reliable real-time communication between services.

Projects

AI Infrastructure Cost Optimizer — Built an AI-assisted platform integrated with Bitbucket PR workflows to analyze Terraform infrastructure changes and recommend cloud cost optimization opportunities and engineering best practices.

Technical Skills

Languages: Java, Python, SQL
Technologies: Spring Boot, Microservices, REST APIs, Apache Camel, Kafka, Apache Flink, Spark, IBM MQ, Kubernetes, Docker, AWS, Azure, Amazon EMR, Terraform, Jenkins, PostgreSQL, Cassandra, Datadog, Splunk, Dynatrace, OpenAI APIs, Vector Embeddings, Multi-Agent Systems, MCP Servers, Ray, LLM/SLM Fine-tuning, Agentic AI
